

Titan 39' 3-Axle Steel Body End-Dump Trailer

CUSTOM BUILT FOR:

Alexander Trucking Ltd.
Surrey, BC

Over the past 15 years, Larry Alexander's "Best Bin Rentals" has become the largest demolition hauler in BC's lower mainland. He firmly believes that his fleet of eight Titan dump trailers is a big part of his success.

"Sometimes I get calls just because there's no one else equipped to do the job," he says. "Customers can see the difference in my Titan trailers. For capacity, for safety on the site, for cornering, there's just no comparison to the other trailers you see around here."

Alexander says that Titan's hoist design makes the difference. "Putting the hoist outside the box allows

more space and a deeper floor; about 10 yards more all together." With the extra yards on board, Titan's light weight helps, too. "I can tow a Titan uphill one gear higher than another trailer. Almost every road I drive has scales on it - they like to see the Titan pull in too!"

Hauling for demolition and construction sites makes safety a key concern. "The design puts the centre of gravity lower, so the trailer just sets right down when it's dumping. On other trailers, stumps can get stuck on the hoist and try to pull it over. That can't happen with the hoist protected under the box. Titan is 'way safer in every way. I wouldn't drive with anything else."

JOB PROFILE

- high strength, low weight to maximize heavy payloads
- high stability for safe dumping on uneven roads and terrain
- sure tracking and cornering for easy handling on mountain roads
- maximum durability to resist loading impacts and abrasive materials
- low maintenance and lifecycle costs for competitive bidding

KEY FEATURES

- Titan Trailer designed steel body
- tri-axle configuration to support load limits with smooth cornering
- top rail tube with shedder angle
- wheel covers deflect debris hazards
- QT 100 corrugated steel to withstand extreme conditions

Strength Through Innovation
