

Titan 48' Tandem Aluminum THINWALL™ Walking Floor Wedge Trailer

JOB PROFILE

- round trips from 80 to 200 miles daily with mixed loads of demolition debris and garbage, recyclables, yard waste, stumps, mulch, pallets
- requires maximum cubic and maximum gross for flexibility in accepting varied load types
- side panels need extra strength to resist load damage; corrosion-resistant components for heavily salted winter roads
- small fleet operation requires minimal downtime and easy maintenance

KEY FEATURES

- original THINWALL horizontal hollow-core extruded sidewalls
- high cubic wedge-shaped body
- liftable front shedder panel
- KEITH® WALKING FLOOR® unloader
- all-aluminum and stainless steel construction

CUSTOM BUILT FOR:

Hagen Trucking Inc.

Bloomington, Minnesota

Hagen Trucking hauls waste materials over routes ranging up to 200 miles in southern Minnesota. Their new wedge trailer is the fourth Titan in the family fleet.

According to Keven Hagen, "The salt here is a serious problem. Other trailers look old after 4 years with corrosion at the 5th-wheel coupler and the suspension. The Titan has stainless steel in there with the aluminum body, so it holds up to the salt."

This unit's custom wedge and liftable shedder were designed for Hagen. "The wedge is hard to buy; not

many will build it for you. It gives me lots of yardage and the material doesn't build up in the back when it's stuffed, so it doesn't wreck the tarps. Other guys can't believe how big it is inside for the same length! I wanted the liftable shedder so I can do any work I need to at the front without getting help to get the plate off. Titan did it – nobody else would. Titan people showed me a lot of respect."

"Hauling tree stumps and debris - it's rough work for a trailer but the THINWALL panels can take it. It's strong, light, straight; pulls easier. I haven't seen anything else that comes close."

Strength Through Innovation
